## **JEWELLERY FROM SUBLIMATION PRINTED METAL**

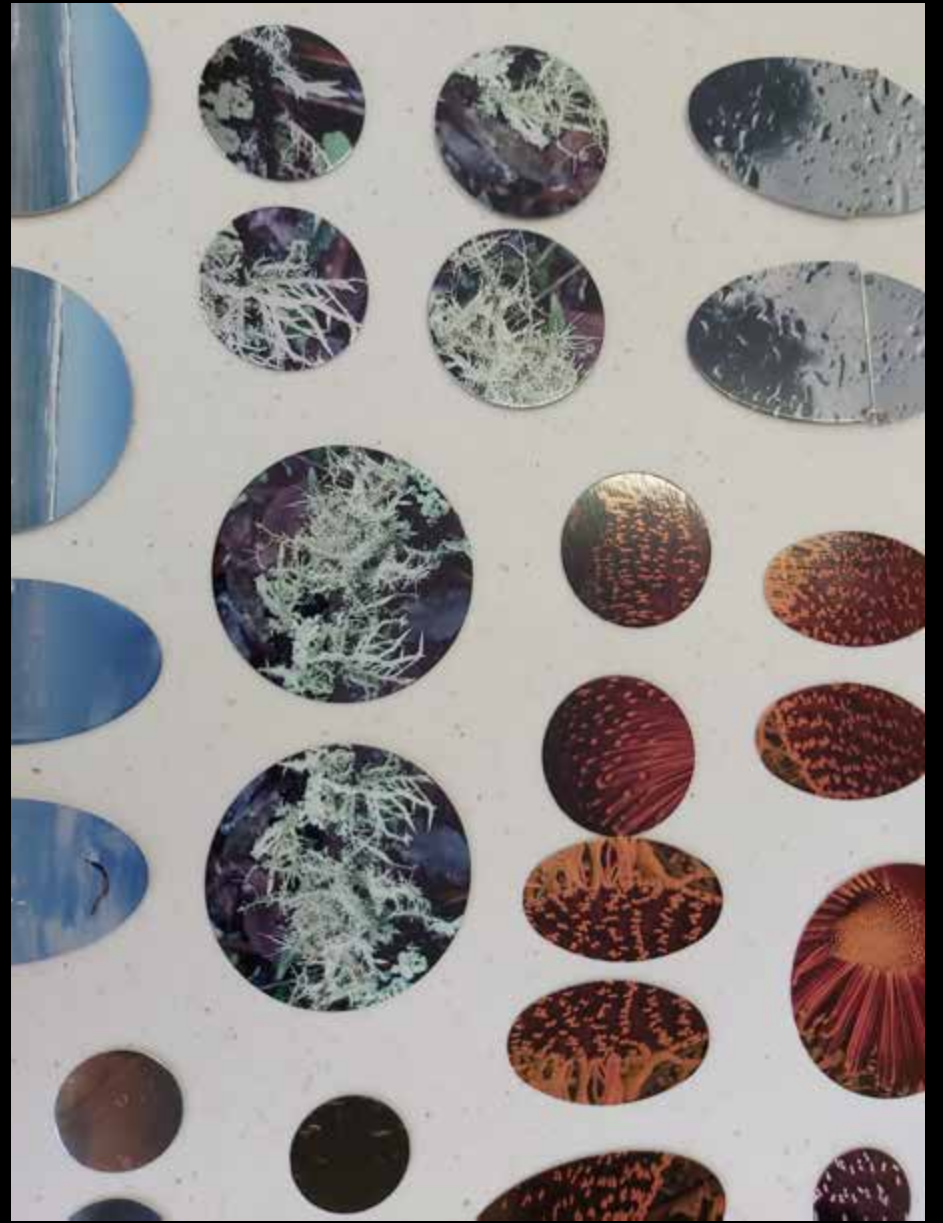

Sublimation printing is a very exciting and simple technique of transferring images onto metal and plastic using heat. In this class, electronic files of images and photos will be printed on to metal and plastic sheets. A variety of techniques will be taught to then create items of jewellery from the printed metal. You will be able to print your own images.

## 4 day workshop

### **INTRODUCTION TO JEWELLERY**

Learn traditional goldsmithing skills to make jewellery like a professional. In this workshop you will learn the techniques of saw-piercing, filing, forming and patterning of metal, as well as soldering, polishing and stone setting. We will start with copper and brass but will move on to silver to make at least one pair of earrings and a silver ring set with a cabochon stone. Anna will also teach you how to professionally finish your jewellery with handmade findings (earring hooks, jump rings, necklace clasps).
